Eric Ferreira

Full Stack Developer · Software Engineer

Posadas, Misiones, Argentina (GMT-3) | Available for fully remote work | +54 376 425-0518 | ericferr_@hotmail.com | linkedin.com/in/eric-ferreira-

PROFILE

Full Stack Developer with **10 years in technology** and a completed degree in Systems Analysis, currently focused on building complete software products end to end. My background is in implementation and infrastructure — systems administration, database integration and production rollouts with real clients — and I now design and build full applications: architecture, data modeling, third-party integrations and deployment. Author of **DropTrend**, a SaaS platform running in production across 12 countries. I have shipped production projects in **JavaScript, PHP and Python**, with a background in Java, which lets me pick up unfamiliar stacks quickly. Looking to join a team as a developer or software architect, with a focus on **AI, automation and integrations**.

EXPERIENCE

Founder & Full Stack Developer Aug 2026 – Present

DropTrend — droptrend.app · Remote

- Designed and built a production SaaS platform that identifies trending products across **12 Latin American countries**, inferring sales signal from daily inventory movement on a source that exposes no sales data.
- Full ownership of architecture: data model, automated daily ingestion pipeline and web application. **55 API endpoints**, ~40,000 lines of code.
- Integrated five external services — **Meta Graph API, WhatsApp Cloud API, Paddle, Polar** and Dropi — using OAuth flows and webhooks. Currently building the **Shopify Admin API** integration for product publishing and catalog sync.
- **Performance:** re-architected the sales computation to run at write time instead of on every query. Ranking response dropped from **8.7s to 1.0s**, and complexity stopped scaling with accumulated history.
- Multi-tenant architecture with **Row Level Security** in PostgreSQL, moving authorization into the database rather than relying on per-endpoint filtering.
- Autonomous agents that generate content with AI and publish to social platforms, orchestrated with GitHub Actions.
- Companion Chrome Extension (Manifest V3).

Full Stack Developer (freelance)

Sep 2026 – Present

Software for municipalities in inland Misiones · Remote

- **Multi-municipality municipal portal**, requested by the municipalities: front-desk records (tracking of paper case files between departments, gap-free numbering, QR-coded receipts) and social assistance (aid registry with audited cancellation). Next.js 14, React and PostgreSQL (Supabase); ~12,000 lines, 28 screens and 14 migrations.
- Each municipality's data isolated with **Row Level Security** and composite keys, backed by automated permission tests. On-screen signatures, uploads from a phone, PDF output and per-department user management.
- Designed for non-technical municipal staff: plain-language UI, minimal flows, and nothing is ever deleted (records are archived or cancelled with a reason).
- **Document manager for official resolutions** (portal module): 3-step wizard for 20+ kinds of leave and entitlements; works out days and quotas, drafts the resolution and exports it to Word and PDF with letterhead. Plain-language AI search (with a keyword fallback), numbering unique per year, per-person history and phone uploads via QR code.
- **SITAC, municipal revenue collection system**: I designed and built the cash desk with count-based close-out, invoicing, payment plans, daily late-payment interest, the debt-free certificate with verification, the public taxpayer lookup and accounting. Values by ordinance with effective dates, audit trail on every change. 54 screens and 351 test cases.
- **Accounting reconciliation tool** for a municipality: Windows desktop program that generates the annexes required by the Court of Audit from the revenue and accounting systems, plus a control sheet that flags numbering mismatches and missing journal entries. Reusable for later periods.

Head of IT Control, Monitoring & Records

Jun 2016 – Present

Provincial Government Agency · Posadas, Argentina

- Lead the technology area of a provincial public agency: administration and support of the institutional IT infrastructure.
- Lead a **team of 3** and coordinate with other, mostly non-technical departments on project follow-up and process improvement.
- Implement technology solutions to streamline internal processes.
- Built a **web dashboard for management reporting** for one of the agency's units: it consolidates, per program, the activities recorded in the field during the year (screenings, school and community workshops, farmers' market). It publishes aggregated data only, with no personal information, and keeps per-person and per-activity counts separate to avoid double-counting.
- Train colleagues on technology and AI, and run **workshops** on AI at work, digital security and productivity tools in schools and community programs, for audiences of all ages.
- Hardware and software incident resolution; end-user support across departments.

Full Stack Developer (freelance)

2025

Custom ERP for a jewelry retailer · Posadas, Argentina

- Built and deployed a custom management system (ERP) for a local retailer, **still in use by the client**.
- Modules for sales, repair services, inventory with full movement traceability, purchasing, suppliers and customers. Relational model of **13 tables**.
- PDF invoicing and reporting with QR code generation.
- Role-based authentication. MVC architecture.
- Requirements gathering directly with the client, through to production rollout.

Systems Implementation & Technical Support

2022 – 2024

Fegar Software · Posadas, Argentina

- End-to-end deployment of management systems at client sites.
- **Customized each system** to the processes and needs of the individual business.
- Database setup and integration.
- Manual functional testing prior to production release, with defect detection and reporting.
- Training and technical support for end users.

Training Facilitator

May – Dec 2021

Escuela de Robótica de Misiones · Posadas, Argentina

- Technology and robotics instruction. IT operations and team coordination.

TECHNICAL SKILLS

Languages	JavaScript · Python · PHP · SQL · Java
Frontend	React · Next.js (App Router) · HTML · CSS
Backend	Node.js · REST APIs · OAuth · Webhooks
Databases	PostgreSQL · MySQL · Supabase · Row Level Security
Infrastructure	Vercel · GitHub Actions · Git · Serverless
AI	Model integration · Autonomous agents · AI-assisted development

SOFT SKILLS

Leadership	Leading a team of 3 since 2016 in a public agency.
Communication	Technology workshops for audiences of all ages; I explain systems to people who won't program them.
Teamwork	Daily coordination with non-technical departments; with clients, from requirements to production.

EDUCATION

Higher Technical Degree in Programming and Systems Analysis — Normal Superior N.º 10 2022 – 2025

Computer Engineering (3 years completed) — Universidad Gastón Dachary 2014 – 2017

Java Full Stack Developer — EducacionIT 2020

Advanced Java — Plan 111Mil, Programming Track 2019

Graduated with an 8 / 10 average.

LANGUAGES

Spanish — native

English — I read, understand and write English without difficulty.
